**DETAILED ACTION**

1. Applicant's response filed 6/16/05 has been received and considered.

***Information Disclosure Statement***

2. The information disclosure statement has been received and considered.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 1-2,5,6 rejected under 35 U.S.C. 103(a) as being unpatentable over Yamada '285 in view of Watanabe '225 and either JP 9-21440 or Komura et al.

Regarding claims 1 and 2 Yamada shows a device similar to that of the elected embodiment, as easily seen in the drawings, but lacks the specifics of the characteristics of the spring.

Springs with linear and non-linear properties are notoriously well known in the art. The examiner take official notice that this is the case. Nevertheless the reference to Watanabe and Komura et al. have been cited to provide a general teaching of this idea.

The Japanese reference to '440 is relied upon in a similar fashion as explained in the NPL document submitted by applicants, presumably a determination of the patentability of applicant's claims from the foreign patent Office. Please see figures 2 and 3 and note the deformation of the spring in figure 3.

It would have been obvious to the ordinary skilled worker in the art to have substituted a spring having linear and non-linear properties for the spring of Yamada simply dependent upon the damping characteristics desired from the absorber. The same rational may be used for setting the claimed dimensional relationship of the spring case 31 to that of the spring—and possibly to prevent unwanted noise due to contact of the spring with the case.

### ***Response to Arguments***

6. Applicant's arguments with respect to claims 1-2 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
